

XM Satellite Radio is a service I pay for voluntarily. By doing so, I expect to hear the programming I want including local traffic and weather. Having traffic & weather reports on satellite radio does not take me away from broadcast radio as I have already made that decision. Just as cable and satellite television are different from local broadcast channels, so is XM Satellite Radio. To remove local traffic and weather from satellite radio would be like taking The Weather Channel off of cable/satellite TV systems.
